**Standard application**
- ERGOTEC
- NOV-O-MATIC

**Technical Application**
- OPT-O-MATIC

**Creels for filament yarns**
- Parallel creel

**Unrolling creels:**
- GAR universal
- GAM monofil
- GAPP polyprop

**Sizing machine for filament and glass yarns**
- SMR-F /-G

**Assembling machine**
- AMR-F /-G
3.1 Warping/ Beaming machines
Warping/ Beaming Machines
Precise length measuring

- The back beams of a batch must all be wound with absolutely the same length. We guarantee a range of under 0.1%.
- When sizing, the batch must be ended as soon as the first back beam is empty.
- Residual lengths on other beams are waste.

Indirect pressing with active kick-back

- The pressure roller is electro-hydraulically controlled, and the contact pressure is infinitely variable between 500 and 6000 N.
- A kickback device allows a quick lifting of the pressure roller during machine stop.
- In this way, it is possible to avoid additional friction against the yarn package.

To produce weaver’s beams of high quality and precise length measurement.
**Yarn uncrossing unit**

- The automatic yarn uncrossing unit guarantees the proper yarn arrangement immediately after machine start-up.
- The warp uncrossing device is combined with the blowing device for the comb.
- The end sheet between the comb and the guide roller is lifted up momentarily.
- Through the lift-up cross ends will be avoided hence no warp end entanglement during sizing.
The V Creel is the optimal creel for the Direct Warper
- Free yarn running between the yarn brake and comb.
- Low yarn tension.
- Higher winding speed (up to 1200 m/min).
- High productivity

It ensures high production speed as well as rapid batch changes.
• The universal stop tensioner
• **OPTOSTOP** has been specially developed for the direct warping of staple fiber yarns at high speed for all count range
  • (5/1 Ne -120/1 Ne)
  • With integrated Opto-electronic stop motion

• Touch free monitoring of the ends
• Indication of running ends
• Short reaction time
• No adjustment is necessary
• Gently braking of the thread, thanks to special brake plates
3.2 Sectional & Warp sampling machines
Perfect solutions for all production fields

- **ERGOTEC / Opt-O-Matic**: High-performance sectional warping machine
- **MULTI-MATIC®**: Automatic short warp-sampling machine
- **Nov-O-Matic**: Automatic sectional warping machine
- **Gir-O-Matic**: Automatic warp-sampling machine
Automation for highest productivity and reproducibility
3.3 Sizing machines
KARL MAYER Sizing machines

Spun yarn

<table>

<td>New sizing machine with size boxes type HSB an VSB</td>
</tr>
</tbody>
</table>
**Traditional system**
Double dip and double squeezing system with 6 rollers.
Example: TKD and SD-C

**Linear system**
Double dip and double squeezing system with 4 rollers in linear design.
Example: CSB

**Sucker system**
One application point with spray bar and one dip.
Example: NS and EVE

**PROSIZE**
Two application points with spray bar and one final application roller.
Example: HSB
ProSize® Size boxes
ProSize® Sizing process
ProSize® Filter system
ProSize® Guarantees highest productivity in weaving

1. Double filter in the reserve vat

2. By-pass filter
ProSize® Perfect handling
3.4 Indigo dyeing machines
ProDye
The perfect solution with best technology for indigo dyeing
ProDye
What is it

ProDye is a combination of technologies developed over the last three years by Karl Mayer achieving the following performances in the dyeing process:

- Darker indigo shade
- Reduction in water consumption and waste yarn
- Double productivity in case of lightweight denim
ProDye
Double Vario

The heart of the ProDye is our dyeing unit Double Vario developed with the best technologies to reach the top performances in indigo dyeing

- Longest dwelling in slasher technology
- Integrated rollers lifting device, easier yarn repairing, better cleaning and maintenance, less time preparation
- Perfect bath circulation by cross flow system for uniform dyeing result
Double Vario
11.2 m dwelling time

The yarn pass length can reach 11.2 m with good vertical movement of the dyeing bath.

With the Double Vario it is possible to reach darker shade of indigo with less vats. The machine is more compact.
### Double Vario

**Practical example of dark denim**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of Double Vario vat</td>
<td>8</td>
</tr>
<tr>
<td>Yarn count</td>
<td>Ne 10 ring</td>
</tr>
<tr>
<td>Number of ends</td>
<td>4850</td>
</tr>
<tr>
<td>Oxidation length</td>
<td>35 m</td>
</tr>
<tr>
<td>Production speed</td>
<td>25 m/min</td>
</tr>
<tr>
<td>Indigo concentration</td>
<td>3 g/l</td>
</tr>
</tbody>
</table>

Indigo coverage on the yarn : 5,5%

Only with the Prodye it is possible to reach this darkness just with 8 vats

Sample
Ne 10 ring with 5,5% indigo
Double Vario
Integrated roller lifting device

All the rollers can be lifted from the dyeing vat with pneumatic system.

- Facilitate the repair of a broken end without emptying the vat. Therefore the dyeing bath remain it the correct conditions

- It is much easier to clean the vat and therefore less time is needed during the preparation process.
Double Vario
Cross-flow circulation system

Perfect bath circulation to reach a better and evenly dye effect.

- Homogeneity in indigo, caustic soda and hydro concentration
- Best center selvage result
- Elimination of the dead zones
- Circulation rate up to 10 times x hour
ProDye
Eco Wash

Washing cascade system with 4 separate compartments and intermediate squeezing units.

- Best washing performance by counter flow
- Circulation system for chemical treatment.

Up to 30% reduction of water consumption
**ProDye**

**Quick oxidation**

Temperature controlled oxidation by air blowing unit for a reproducible quality.

- Increasing dyestuff pick-up with hot airflow
- 30% reduction of oxidation length

Less yarn waste and better tone uniformity of the warp sheet
**ProDye**

**Double head system**

In case of lightweight denim (~< 200 g/m in warp), the double head system gives us the possibility to double productivity.

- Because of our unique features, Karl Mayer is able to guarantee a perfect and uniform dye process with yarn density up to 140%.

**Double head gives us the possibility to run almost all lightweight articles in double sheet**
ProDye

Practical example of double sheet production

Number of Double Vario vat : 6
Yarn count : Ne 30 ring
Number of ends : 7650 x 2
Oxidation length : 35 m
Production speed : 35 m/min
Indigo concentration : 3 g/l

Indigo coverage on the yarn : 4 %

This means a production of 70 m/min of dyed warp
ProDye
Know-how in Denim

Karl Mayer does not just have the best technology in the market, but also the best pre and after sales support.

For the benefit of our customer we can provide:

- **Product and key account managers**: to assist our customers with high competence in the implementation of the best solutions for their requirement

- **Indigo dye technologists**: to support our customers in the process optimization.

Karl Mayer is the market leader and preferred supplier for the fashion denim producer
